

6516207053.txt

I am an over the road truck driver, with my wife as a team. We both use our XM radio to stay abreast of news and current events as well as for entertainment, but the first channel we both listen to at the beginning of our shift is the weather. If we are headed to one of the cities XM offers instant traffic and weather we listen to that channel to see if there are roadways we need to avoid or to see if there will be adverse weather conditions to prepare for. By having this ability on our XM radio, we are not trying to find a local radio station that might have the information we need, and thereby paying more attention to our job, "Driving Safely." Thank you and I sincerely urge you to reject NAB's petition 04-160.
